

It knows you.
Because you wrote it down.

The mark

A jar. Glass around wavy strata, a sprout growing inside, a door at the base. The vivarium as anyone keeps one: a small contained world in layers, something alive in it, and the gate the agent passes through. One ink, always the ground's text color. Never amber, never two colors, never a fill behind the glass.

Small sizes and the app icon

One mark at every size, no small cut. At 16 px the jar is a jar and the sprout is a dot, and that is enough. Never a lockup below 24 px. The Windows icon is the mark in lime on a #0C100E tile, corner radius 22%, so it has its own ground on light and dark taskbars. Vivary.ico carries 256, 128, 64, 48, 32, 24 and 16 from the one master.

Wordmark and lockups

Wordmark: the header brand word exactly. Big Shoulders 800, optical size 40, tracking +1%, as written: Vivary. Mark height 1.12 x cap height, gap 0.45 x cap. The claim under a lockup: Big Shoulders 800, opsz 72, 22% of the wordmark size, same ink.

Clear space

The vivarium, drawn

The hero illustration for the home page: a glass cloche over four strata, ferns, stones, a door at the edge of the world, a label with one recorded line. Line art and dither in text, text-2 and text-3. Amber once. No gradients, no glow.

Palette. The site's eight tokens, the app's three, one rule between them

ground	pane	rule	text	text-2	text-3	amber	app ground	app text	lime
#080705 page	#0E0C09 panels, 1.0:1 from ground	#2A2419 borders #1A1712 rule-soft, hairlines	#EBE5D8 human words 16.0:1 ground, 15.6:1 pane	#A69D8D secondary 7.5:1 ground	#837C6F captions, keys 4.9:1 ground, body size only	#E9A23B recorded only 9.3:1 ground, never decorative	#0C100E 1.1:1 from site ground	#EDF4EF 17.1:1 on app ground	#B8F263 app only action, icon. 14.5:1

Keep the two palettes separate. The grounds sit 1.1:1 apart and the off-whites 1.1:1 apart, so nobody sees two blacks or two whites. Amber and lime sit at 1.6:1: same lightness, different hue, and side by side they read as warning beside success. Amber marks the record on the site. Lime is the action in the app. The mark and the wordmark are always the ground's text color. In print, text-2 #6B665C, text-3 #756F64, amber #8F5808 (5.9:1), lime #346C2B, the app's light-mode primary (6.3:1).

Type roles

The claim, the brand word	What it saw. What it changed. What it left alone.	Big Shoulders 800, opsz 72. Section heads 700. The brand word 800, opsz 40.
Where the memory file speaks	The plan says: migrate the settings page first.	Fraunces italic 400, SOFT 30, WONK 1. Only where the memory file speaks.
The record	Before the agent works, Vivary hands it a bounded capsule of the files that matter.	Geist Mono 400, 500 for buttons. Body, ledgers, nav, captions, code. Amber keys live here.
App interior	Projects, conversations, files, approvals and Stop stay visible.	Inter, per the app's own rules. Big Shoulders only in the wordmark.

Do not

- Put the mark in amber, in lime on the site, or in two colors. Use amber for anything the workspace did not record.
- Add a second tile behind the mark, a glow, a gradient, a shadow or an outline.
- Rotate or stretch the mark, straighten the waves, fill the glass, drop the sprout, or drop the door.
- Reuse the old mint, navy, Bricolage Grotesque, the sparkle favicon or the glowing strata image. They belong to the retired product.
- Set the wordmark in any face but Big Shoulders, below 700, or in all caps. Set body, nav or buttons in anything but Geist Mono.
- Split the tagline. "It knows you." never appears without "Because you wrote it down."
- Show a download button, a price, or a release date. The product is in development.
- Use chat bubbles, sparkles, robots, brains, network graphs or stock photography anywhere near the brand.
